EXPERIENCE

Service Virtualization

- Implemented the API Virtualization Project for a renowned global hospitality chain. Familiarity with tools such as Splunk, OpenShift Platform, Kubernetes, Jenkins, Postman.
- Automated the process of collecting request/response logs by reducing the time required to process data, thus increasing productivity by more than 40%.
- Implemented Service Virtualization techniques to simulate unavailable or complex backend services that closely mimic real-world APIs, ensuring uninterrupted development and testing processes thus reducing dependencies on external systems.
- Collaborated with Development, QA, and Integration teams to integrate virtual services seamlessly into the testing and development processes.

Migration Project

- Worked on a Migration project for a renowned global hospitality chain as a Backend developer which gave me hands-on experience in Java Microservices, Spring Boot, SOAP and RESTful Web Services.
- Extensively used Java 8 features for performance optimization.
- Developed and involved in writing Unit Test cases using Junit and Mockito to find bugs, debug them and produce efficient code.

Loyalty Durable Project

- Worked as a Java Backend Developer for a prestigious global hospitality chain, handling stories/tasks related to the project in an Agile manner.
- Investigated and resolved technical issues by conducting a thorough analysis, debugging code, and identifying root causes of bugs in the Java backend codebase.
- Collaborated with diverse teams including Developers, QA Engineers, and project managers to diagnose and rectify critical issues.
