SKILLS

CORE Java

Springboot

Restful API

SQL

GIT

HTML

Angular

Spring MVC

CSS

Job Scheduling : Autosys

data structure

PERSONAL PROJECTS

Flight Management System

- A web application which was developed using spring boot (backend), angular 6 (front end), it was a portal for Flight management. It was designed to book flights i.e. user first need to sign up or login then he can book a ticket of flight and see details of the ticket issued.
- Languages used:- Spring Tool Suite, Visual Studio Code, Postman, Oracle 10g database, Core Java, HTML, CSS, Bootstrap, Spring Boot, Angular 6
- Front end and Backend development of login and sign up page, view user data, update user data, delete user data

Front-End Template design

- Developed front end of an IT company using HTML, CSS and Java script. This website provides information of apple products and customers can also buy products from it by getting redirected to original apple website. Whole website is made with basic concepts of cascading style sheets. Front-End template design for full website.
- Languages used:- HTML, CSS and Java script

CERTIFICATES AND TRAININGS

Spring Boot 2.0 Essential training - LinkedIn Learning

Speak English Professionally by Georgia Institute of Technology - coursera

EXPERIENCE SUMMARY
